A note on energy extremal properties for rotating stars in general relativity
In the second of formulae (1), $\delta_1^1$ should be replaced by $\eta^k$; the correct formula reads
\[ \hat{g}^{0k} = + \eta^k J(\rho/4\pi r^3) + O(r^{-3}). \]

Trends in the energy dependence of strong interaction characteristics at ultra-high energies
A full square (■) should replace the open square (□) in figure 2. In the caption to figure 3 ‘(O, without NN,...’ should read ‘(●, without NN,...’. In figure 6 values marked on the horizontal axis should read: $10^{-2}$, $10^{-1}$, 1, 10, $10^{+2}$, $10^{+3}$.
