(1) In the experimental section, the amount of PVA used in the preparation of H2SO4/PVA gel should be 2 g instead of 20 mg.
(2) The equation for the power density, $P_{\text{cell}}$, on page 4 should be corrected as follows:

$$P_{\text{cell}} = \frac{E_{\text{cell}}}{\Delta t},$$

where $V$ is the voltage after IR drop, $M$ is the total mass of CNTs, $R$ is the ESR and $\Delta t$ is the discharge time.
(3) The Y-axis label in figure 5 should be $P_{\text{max}}$ instead of $P_{\text{cell}}$.

$$P_{\text{max}} = \frac{V^2}{4RM},$$

where $V$ is the voltage after IR drop, $R$ is the ESR, and $M$ is the total mass of the electrode materials.

**Figure 5.** Performance comparison of various solid-state flexible CNT supercapacitors. The legend indicates the active electrode materials of each supercapacitor.
