# Contents

**About the authors** x

**1 Introduction** 1-1

**2 Kinematics** 2-1

2.1 Equations needed with symbols defined 2-1
2.2 Understanding the equations 2-2
2.3 Keeping the signs straight 2-3
2.4 Motion in two dimensions: relating $x$ and $y$ 2-4
2.5 Summary and important notes 2-7

**3 Newton's laws** 3-1

3.1 Applying the first law 3-2
3.2 Applying the second law 3-2
3.3 Applying the third law 3-2
3.4 Examples 3-3
3.5 Summary and important notes 3-7

**4 Energy and momentum** 4-1

4.1 Energy 4-1
4.2 Example 4-2
4.3 Momentum 4-3
4.4 Types of collisions 4-4
4.5 Summary and important notes 4-4

**5 Circular and rotational motion** 5-1

5.1 Centripetal force 5-1
5.2 Torque 5-4
5.2.1 Moment of inertia 5-6
5.3 Waves 5-7
5.4 Oscillations 5-7
5.4.1 Wavelength and period ($\lambda$, $T$, or $\tau$) 5-8
5.4.2 Frequency ($f$ or $\nu$) 5-8
5.4.3 Angular frequency ($\omega$) 5-8
5.4.4 Wave number ($k$) 5-9

5.4.5 Phase angle ($\phi$) 5-9
5.4.6 Quick reference guide for descriptions of oscillations 5-9
5.5 Traveling waves 5-10
5.6 Standing waves and boundary conditions 5-10

**6 Basic optics 6-1**
6.1 Diffraction and interference 6-1
6.2 Thin lenses 6-3
6.3 Summary and important notes 6-5

**7 The right-hand rule 7-1**
7.1 How to use it properly 7-2
7.2 Special case of magnetic fields from currents 7-3
7.3 Summary and important notes 7-3

**8 Electric fields and electric potential 8-1**
8.1 Finding fields and forces from point charges 8-1
8.1.1 Electric field integrals 8-4
8.2 Electric potential from point charges 8-6
8.3 Summary and important notes 8-7

**9 Magnetic fields 9-1**
9.1 Biot–Savart law 9-1
9.1.1 Right-hand rule for magnetic fields 9-2
9.1.2 Calculations with the Biot–Savart law 9-3
9.2 Magnetic forces 9-4
9.3 Trigonometry for electric and magnetic field integrals 9-6
9.4 Induced currents: Faraday's and Lenz's law 9-8

**10 Circuits 10-1**
10.1 Ohm's law 10-1
10.2 Kirchhoff's loop and junction laws 10-2
10.2.1 Loop law: the sum of the potential differences around a closed circuit is zero 10-2
10.2.2 Junction law: the sum of all currents into a junction must be equal to the sum of the currents out of the junction 10-4
10.3 Summary and important notes 10-6

**11 Modern physics** 11-1

11.1 Relativity 11-1

11.1.1 Time dilation 11-2

11.1.2 Length contraction 11-4

11.1.3 Lorentz velocity transformations 11-5

11.2 Quantum mechanics 11-6

11.2.1 The photoelectric effect 11-7

11.2.2 Electron transitions 11-8

11.2.3 Wavefunctions and probability 11-9

11.3 Brief aside on energy equations 11-10

11.4 Summary and important notes 11-11

**12 General problem-solving tips** 12-1

12.1 Break the problem down into as small pieces as possible 12-1

12.2 Write down everything you have and what you are trying to find 12-1

12.3 Check units 12-2

12.4 Pull all the $10^n$ factors out of your calculation before putting it in your calculator 12-2

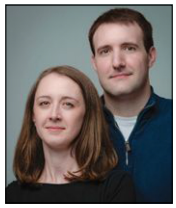
12.5 Practice algebra 12-3

12.6 Keep everything symbolic as long as possible 12-3

12.7 Electron volts 12-4

# About the authors

## Joshua F Whitney and Heather M Whitney



Joshua F Whitney and Heather M Whitney have both taught at Wheaton College in Wheaton, IL in a variety of roles in the Department of Physics. Joshua is also an amateur bodybuilder and Megaman enthusiast. He completed his PhD in Physics at the University of Tennessee, working in theoretical particle physics. Since then he has spent considerable time teaching introductory and upper level physics classes and labs.

Heather is also an amateur gardener and cook, and fitness protegé of Joshua. She completed her PhD in Physics at Vanderbilt University, doing research at the Vanderbilt University Institute for Imaging Science. In addition to teaching physics, she conducts research in medical physics.
