Preface

This book covers the state-of-the-art techniques of optical coherence tomography (OCT) imaging for the diagnosis of retinal diseases. Clinical disorders of the retina have been attracting the attention of researchers, aiming at reducing the blindness rate. This includes uveitis, diabetic retinopathy, macular edema, endophthalmitis, proliferative retinopathy, age-related macular degeneration and glaucoma. Currently, most ophthalmologists perform diagnosis by visual observation and interpretation. Treatment is significantly dependent on having an early and accurate diagnosis, which can be significantly improved by employing disease-specific computer-aided diagnostic (CAD) systems based on different image modalities such as: OCT, fundus imaging, and optical coherence tomography angiography (OCTA). This book will focus on OCT imaging for the diagnosis of retinal diseases. Among the topics discussed in the book are computerized tools for the automatic segmentation of diffuse retinal thickening edemas using OCT scans; recent developments in OCTA imaging for the diagnosis and assessment of diabetic retinopathy; multimodal photoacoustic microscopy; identification and measurement of abnormal retinal fluid; comparison of ocular ultrasound with OCT in the evaluation of diabetic retinopathy; OCT biomarkers in diabetic macular edema; deep learning-based multi-class retinal fluid segmentation and detection in OCT images; OCT and OCTA for the diagnosis and treatment of diabetic macular edema; eye sicknesses diagnosis using OCT and fundus imaging techniques; and early identification of diabetic retinopathy through a higher-order spatial 3D-OCT appearance model CAD system.

In summary, the main aim of this book is to help advance scientific research within the broad field of OCT imaging for the diagnosis of retinal diseases. The book focuses on major trends and challenges in this area, and it presents work aimed to identify new techniques and their use in biomedical analysis.

Ayman El-Baz
Jasjit S Suri

Acknowledgements

The completion of this book could not have been possible without the participation and assistance of so many people whose names may not all be enumerated. Their contributions are sincerely appreciated and gratefully acknowledged. However, the editors would like to express their deep appreciation and indebtedness particularly to Dr Ali H Mahmoud and Dr Yaser Elnakieb for their endless support.

Ayman El-Baz
Jasjit S Suri

Editor biographies

Ayman El-Baz

Ayman El-Baz is a Distinguished Professor at University of Louisville, Kentucky, United States and University of Louisville at Alamein International University (UofL-AIU), New Alamein City, Egypt. Dr El-Baz earned his BSc and MSc degrees in electrical engineering in 1997 and 2001, respectively. He earned his PhD in electrical engineering from the University of Louisville in 2006. Dr El-Baz was named as a Fellow for IEEE, Coulter, AIMBE and NAI for his contributions to the field of biomedical translational research. Dr El-Baz has almost two decades of hands-on experience in the fields of bio-imaging modeling and non-invasive computer-assisted diagnosis systems. He has authored or coauthored more than 700 technical articles.

Jasjit S Suri

Jasjit S Suri is an innovator, scientist, visionary, industrialist and an internationally known world leader in biomedical engineering. Dr Suri has spent over 25 years in the field of biomedical engineering/devices and its management. He received his PhD from the University of Washington, Seattle and his Business Management Sciences degree from Weatherhead, Case Western Reserve University, Cleveland, Ohio. Dr Suri was crowned with the President's Gold medal in 1980 and made Fellow of the American Institute of Medical and Biological Engineering for his outstanding contributions. In 2018, he was awarded the Marquis Life Time Achievement Award for his outstanding contributions and dedication to medical imaging and its management
