<b>Preface</b>	<b>xvi</b>
<b>Acknowledgement</b>	<b>xvii</b>
<b>Author biography</b>	<b>xviii</b>
<b>1 The basics of x-rays</b>	<b>1-1</b>
1.1 What are x-rays?	1-1
1.2 Characteristics and properties of x-rays	1-2
1.3 Substances and x-rays	1-3
1.4 The effect of x-rays on radiographic film	1-4
References	1-5
<b>2 Radiographic quality</b>	<b>2-1</b>
2.1 Properties of radiographic quality	2-1
2.1.1 Density	2-1
2.1.2 Contrast	2-1
2.1.3 Definition	2-1
2.1.4 Distortion	2-2
2.2 Quality control factors	2-2
2.3 Density and current	2-3
2.4 The relationship between current and time	2-3
2.5 Other factors affecting density	2-4
2.5.1 Focus–film distance	2-4
2.5.2 Films and intensifying screens	2-5
2.5.3 Anti-scatter grids	2-5
2.6 Kilovolts and contrast	2-6
2.7 Other factors controlling the contrast	2-7
2.7.1 Grids	2-7
2.7.2 Collimation and restrictions	2-7
2.7.3 Filtering	2-7
2.7.4 Film	2-7
2.7.5 Film processing	2-7
2.7.6 Screens	2-7
2.7.7 The patient	2-7

2.8	Definition	2-8
2.8.1	Deformation by movement	2-8
2.8.2	Geometric deformation	2-8
2.8.3	Focus–film distance	2-9
2.8.4	The irradiated material	2-9
2.8.5	Quantum traces	2-9
2.9	Distortion	2-9
2.9.1	Size distortion	2-10
2.9.2	Profile distortion	2-10
2.10	Rules for good quality x-ray images	2-10
	References	2-11
<b>3</b>	<b>Radiology devices</b>	<b>3-1</b>
3.1	The basics of radiology devices	3-1
3.2	A self-rectifying x-ray generator	3-3
3.3	The difference between x-ray tubes in systems of low and high power	3-5
	References	3-6
<b>4</b>	<b>Imaging systems</b>	<b>4-1</b>
4.1	Introduction	4-1
4.2	Tomography	4-1
4.3	Angiographic systems	4-1
4.4	Radiography and fluoroscopy devices (R/F)	4-3
4.4.1	Screen fluoroscopy	4-4
4.4.2	Conventional fluoroscopy	4-4
4.4.3	Remote controlled fluoroscopy	4-6
4.4.4	Fluoroscopy with a flat panel	4-7
4.5	Devices for neurology	4-8
4.6	Mobile devices	4-9
4.6.1	Mobile devices for general use	4-10
4.6.2	Mobile devices for surgical use	4-12
4.7	Portable devices	4-13
4.8	Mammography	4-14
4.9	Photofluorography devices	4-17
4.10	Urology devices	4-18
4.11	Therapeutic x-ray devices	4-19
	References	4-21

<b>5</b>	<b>X-ray tubes</b>	<b>5-1</b>
5.1	Introduction	5-1
5.2	Structure and operation	5-1
	5.2.1 The cathode	5-2
	5.2.2 The focusing cup	5-2
	5.2.3 The anode	5-3
	5.2.4 Anode rotation speed	5-6
	5.2.5 The power of the tube	5-9
	5.2.6 The glass envelope and protective housing	5-9
5.3	Different types of tubes	5-11
5.4	Characteristics of the focal spot	5-13
	References	5-16
<b>6</b>	<b>The components of x-ray devices</b>	<b>6-1</b>
6.1	The x-ray generator	6-1
6.2	Autotransformer	6-2
6.3	The exposure switch	6-2
6.4	The x-ray contactor	6-3
6.5	The timer	6-3
6.6	The rotation circuit	6-3
6.7	Additional functions	6-4
6.8	Classification of generators	6-4
6.9	The transformer cabinet	6-6
	6.9.1 The transformation ratio	6-8
6.10	Rectification and power	6-9
	6.10.1 Self-rectification	6-9
	6.10.2 Half-wave rectification	6-10
	6.10.3 Full-wave rectification	6-10
	6.10.4 Three-phase rectifiers	6-12
	6.10.5 A three-phase system with six pulses and six rectifiers	6-12
	6.10.6 A three-phase system with twelve pulses and twelve rectifiers	6-14
6.11	High voltage cables	6-14
6.12	The radiographic tube	6-15
6.13	Electromechanical accessories	6-17
6.14	Radiographic tables	6-18
	6.14.1 Simple tilting tables	6-19
	6.14.2 Fluoroscopic tilting tables	6-20
	6.14.3 Remotely controlled tables	6-22

6.15	Tomography	6-23
6.15.1	Tomographic systems	6-26
6.15.2	The motor drive system	6-26
6.15.3	The tomograph bar	6-27
6.15.4	Turret	6-27
6.15.5	Control cabinet	6-27
6.15.6	Multidirectional tomograph	6-28
	References	6-28

# Preface

The justification of this text is the need to deliver to a wide circle of readers—biomedical engineers, engineering students, physicians, medical students, radiographers and related professionals—a basic tool to understand the basics of all aspects involved in the radiology of today.

The decision to write it arises from the proven fact that there exist almost no texts referring specifically to the technical aspects of radiology, while the literature concerning medical or diagnostics aspects in radiology are abundant. Therefore, a lot of information has been gathered to realize this work in two parts. The first deals with the basic concepts in radiology, the technique of radiographic films, the basic equipment, and a description of almost all components of the equipment used for these purposes. The second part concerns exclusively computed tomography, or CT scan. It is reviewed from the basics to the most common diagnostic applications, through the technical description of all components and elements used in the most revolutionary technique developed since the discovery of x-rays.

This book aims to give only the basics, and so many specialized items have had to be omitted, because the purpose is not to make an encyclopedia of radiology or a design manual. Consequently, we have tried to compensate for the lack of technical aspects with a concern for the didactical aspects and careful explanation of concepts, keeping in mind, as previously stated, the wide range of users.

# Acknowledgement

To my family who supported me during the long period of preparation of this work, especially my son Guillermo, who contributed his talented art in the realization of the drawings, a special thanks to the companies Siemens and Philips, leaders in medical imaging technology, that provided fundamental materials for the successful completion of this book.

# Author biography

## **Guillermo Avendaño Cervantes**

---

Guillermo Avendaño Cervantes is a Chilean engineer, a specialist in biomedical engineering with over 40 years of professional performance in class biomedical equipment companies and Professor at seven Universities in Latin American countries. He is the author of numerous articles and several specialist biomedical engineering books, creator of 38 innovative items of electromedical equipment, has several patents and is a member of five international scientific societies.
